Brand New Book ***** Print on Demand *****.Excerpt from Assimilating Case Tools in Organizations: An Empirical Study of the Process and Context of Case Tools, October 1989 This paper describes a study into how CASE Computer Aided Software Engineering tools are deployed by information systems units within organizations. The study explored the process by which CASE tools are assimilated by organizations, and how this process is influenced by various organizational and technological factors. Case studies of eleven companies who have adopted a single CASE tool were conducted, and the findings from this investigation were analyzed in terms of the conceptual frameworks of innovation research. The data reveal that nominal amounts of time and effort are spent on evaluating the CASE tools prior to their adoption, and that as a result, organizational consequences of these tools are poorly apprehended. Further, a number of key factors facilitating and inhibiting the process of CASE tools assimilation were identified. The implications of these findings for research and practice are discussed, and specific recommendations for managing the implementation of CASE tools are provided.
