Excerpt: . . . CHAPTER IV. ABSORPTION OF MEDICINAL AGENTS. The division upon which we now enter constitutes, in my opinion, by far the most important section of our task. Errors may creep into the nicest calculations, more especially when, as occurred in our bath experiments, the original weights are large, while the variations are slight; and the evidence drawn from the contagion of disease will be always cavilled at, until we have discovered something more regarding its nature. But when the application of a drug to the exterior of the body is followed by the usual physiological and therapeutic effects; nay more, when its presence may be detected in the blood, or the excretions, no shadow of a doubt can remain, that the substance so applied has been absorbed into the system. That such is the case I trust to prove in the following pages, and to...
