Samples were analyzed for selected pesticides several times during the year. Salinity, as measured by specific conductance, ranged from 11,500 to 37,600 microsiemens per centimeter; total recoverable boron ranged from 4,000 to 16,000 micrograms per liter; and total recoverable molybdenum ranged from 630 to 2,600 micrograms per liter. Median concentrations of total arsenic and total selenium were 97 and 2 micrograms per liter. Atrazine, prometon, propazine, and simazine were the only pesticides detected in water samples collected at the MD-1 pumping station. Major ions, trace elements, and selected pesticides also were analyzed in water and bottom-sediment samples from five of the southern evaporation ponds at Tulare Lake Drainage District. Water enters the ponds from the MD-1 pumping station at pond 1 and flows through the system terminating at pond 10. The water samples increased in specific conductance (21,700 to 90,200 microsiemens per centimeter) and concentrations of total arsenic (110 to 420 micrograms per liter), total recoverable boron (12,000 to 80,000 micrograms per liter), and total recoverable molybdenum (1,200 to 5,500 micrograms per liter) going from pond 1 to pond 10, respectively. Pesticides were not detected in water from any of the ponds sampled. Median concentrations of total arsenic and total selenium in the bottom sediments were 4.0 and 0.9 micrograms per gram, respectively. The only pesticides detected in bottom-sediment...
